

Experiment NO. 01B

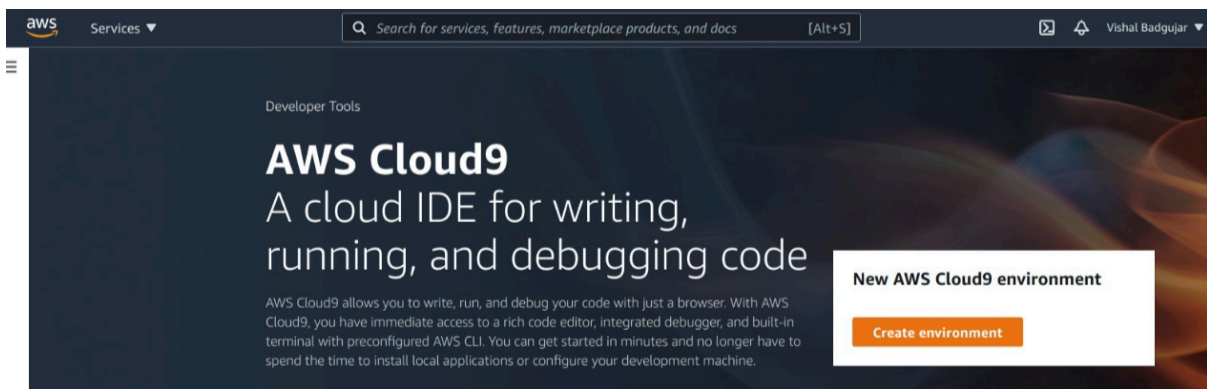

Aim: To understand the benefits of Cloud Infrastructure and Setup AWS Cloud9 IDE, Launch AWS Cloud9 IDE and Perform Collaboration Demonstration.

Steps:

1. Login with your AWS account.
2. Navigate to Cloud 9 service from Developer tools section as below:

3. Click on Create Environment :

4. Provide name for the Environment (WebAppIDE) and click on next.

AWS Cloud9 > Environments > Create environment

Step 1
Name environment

Step 2
Configure settings

Step 3
Review

Name environment

Environment name and description

Name
The name needs to be unique per user. You can update it at any time in your environment settings.

WebAppIDE

Limit: 60 characters

Description - Optional
This will appear on your environment's card in your dashboard. You can update it at any time in your environment settings.

Write a short description for your environment

Limit: 200 characters

Cancel Next step

5. Keep all the Default settings as shown in below:

AWS Cloud9 > Environments > Create environment

Step 1
Name environment

Step 2
Configure settings

Step 3
Review

Configure settings

Environment settings

Environment type [Info](#)
Run your environment in a new EC2 instance or an existing server. With EC2 instances, you can connect directly through Secure Shell (SSH) or connect via AWS Systems Manager (without opening inbound ports).

- ☒ Create a new EC2 instance for environment (direct access)
Launch a new instance in this region that your environment can access directly via SSH.
- ☐ Create a new no-ingress EC2 instance for environment (access via Systems Manager)
Launch a new instance in this region that your environment can access through Systems Manager.
- ☐ Create and run in remote server (SSH connection)
Configure the secure connection to the remote server for your environment.

Instance type

- ☒ t2.micro (1 GiB RAM + 1 vCPU)
Free-tier eligible, ideal for educational users and exploration.
- ☐ t3.small (2 GiB RAM + 2 vCPU)
Recommended for small-sized web projects.
- ☐ m5.large (8 GiB RAM + 2 vCPU)
Recommended for production and general-purpose development.
- ☐ Other instance type
Select an instance type.

t5.nano

Platform

- ☒ Amazon Linux 2 (recommended)
- ☐ Amazon Linux AMI
- ☐ Ubuntu Server 18.04 LTS

Cost-saving setting
Choose a predetermined amount of time to auto-hibernate your environment and prevent unnecessary charges. We recommend a hibernation setting of half an hour of no activity to maximize savings.

After 30 minutes (default)

IAM role
AWS Cloud9 creates a service-linked role for you. This allows AWS Cloud9 to call other AWS services on your behalf. You can delete the role from the AWS IAM console once you no longer have any AWS Cloud9 environments. [Learn more](#)

AWSServiceRoleForAWSCloud9

Network settings (advanced)

No tags associated with the resource.

Add new tag

You can add 50 more tags.

Cancel Previous step Next step

6. Review the Environment name and Settings and click on Create Environment:

The screenshot shows the AWS Cloud9 console with the 'Create environment' wizard. The left sidebar shows 'Your environments', 'Shared with you', 'Account environments', and 'How-to guide'. The main area is titled 'Review' and shows the 'Environment name and settings'.

Step 1: Name environment

Step 2: Configure settings

Step 3: Review

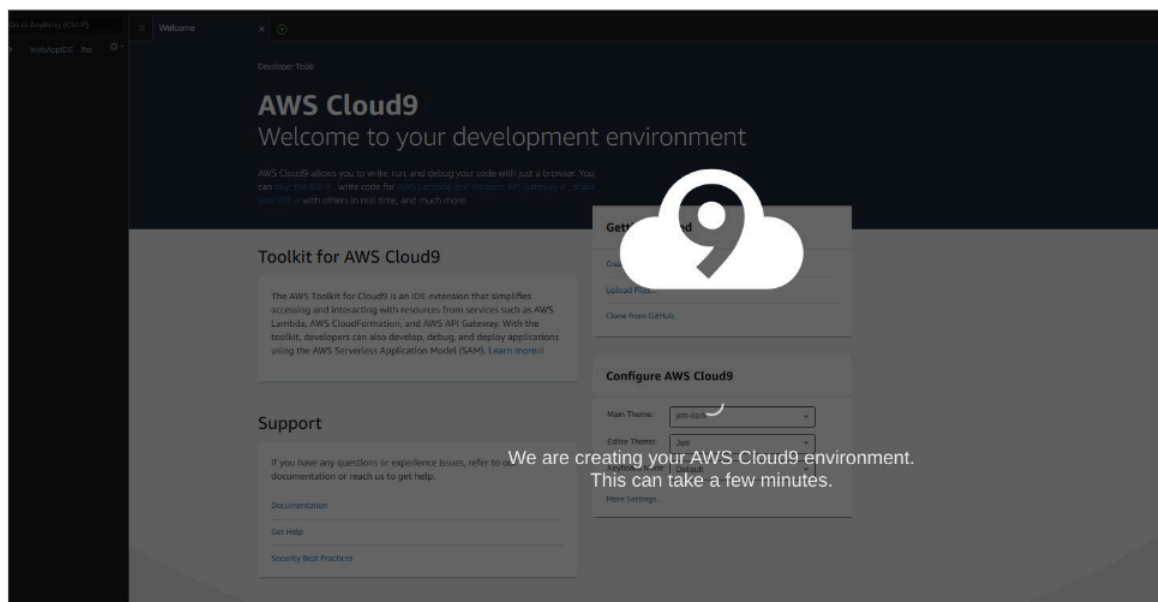

Environment name and settings

- Name: WebAppIDE
- Description: No description provided
- Environment type: EC2
- Instance type: t2.micro
- Subnet:
- Platform: Amazon Linux 2 (recommended)
- Cost-saving settings: After 30 minutes (default)
- IAM role: AWSServiceRoleForAWSCloud9 (generated)

We recommend the following best practices for using your AWS Cloud9 environment

- Use **source control** and **backup** your environment frequently. AWS Cloud9 does not perform automatic backups.
- Perform regular **updates of software** on your environment. AWS Cloud9 does not perform automatic updates on your behalf.
- Turn on AWS CloudTrail** in your **AWS account** to track activity in your environment. [Learn more](#)
- Only share your environment with **trusted users**. Sharing your environment may put your AWS access credentials at risk. [Learn more](#)

Buttons: Cancel, Previous step, Create environment

7. Till that time open IAM Identity and Access Management in order to Add user In other tab.

8. Add user provide manual password if you want and click on Next permission tab.

9. Click on Create group

Add user

1

▼ Set permissions

Add user to group

Copy permissions from existing user

Attach existing policies directly

Get started with groups
You haven't created any groups yet. Using groups is a best-practice way to manage users' permissions by job access, or your custom permissions. Get started by creating a group. [Learn more](#)

Create group

► Set permissions boundary

10. Provide group name and click on create group.

Create group

Create a group and select the policies to be attached to the group. Using groups is a best-practice way to manage users' permissions by job functions, AWS service access, or your custom permissions. [Learn more](#)

Group name: WebAppsgroup

Create policy Refresh

Filter policies Search Showing 669 results

	Policy name	Type	Used as	Description
<input type="checkbox"/>	AdministratorAccess	Job function	None	Provides full access to AWS services and resources.
<input type="checkbox"/>	AdministratorAccess-Amplify	AWS managed	None	Grants account administrative permissions while explicitly allowing direct access to resour...
<input type="checkbox"/>	AdministratorAccess-AWSElasticBeanst...	AWS managed	None	Grants account administrative permissions. Explicitly allows developers and administrators...
<input type="checkbox"/>	AlexaForBusinessDeviceSetup	AWS managed	None	Provide device setup access to AlexaForBusiness services
<input type="checkbox"/>	AlexaForBusinessFullAccess	AWS managed	None	Grants full access to AlexaForBusiness resources and access to related AWS Services
<input type="checkbox"/>	AlexaForBusinessGatewayExecution	AWS managed	None	Provide gateway execution access to AlexaForBusiness services
<input type="checkbox"/>	AlexaForBusinessLifesizeDelegatedAcc...	AWS managed	None	Provide access to Lifesize AVS devices

Cancel Create group

11. After that group is created click on next if u want to provide tag else click on Review for user settings and click on create user as shown in fig.

Add user

1 2 3 4 5

Review

Review your choices. After you create the user, you can view and download the autogenerated password and access key.

User details

User name	apsit
AWS access type	AWS Management Console access - with a password
Console password type	Custom
Require password reset	No
Permissions boundary	Permissions boundary is not set

Permissions summary

The user shown above will be added to the following groups.

Type	Name
Group	WebAppapsitgroup

Tags

No tags were added.

Cancel Previous Create user

12. Now close that window and Navigate to user Groups from left pane in IAM.

Identity and Access Management (IAM)

Dashboard

Access management

- User groups
- Users
- Roles
- Policies
- Identity providers
- Account settings

Access reports

- Access analyzer
- Archive rules
- Analyzers
- Settings
- Credential report
- Organization activity
- Service control policies (SCPs)

Introducing the new User groups experience
We've redesigned the User groups experience to make it easier to use. [Let us know what you think.](#)

IAM > User groups

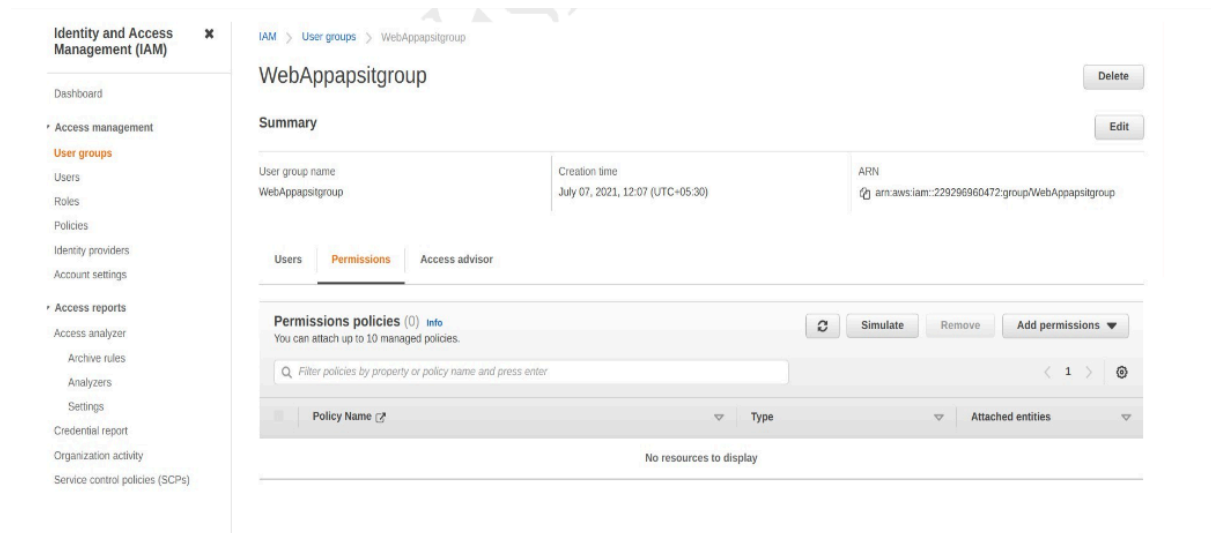

User groups (1) [Info](#)

A user group is a collection of IAM users. Use groups to specify permissions for a collection of users.

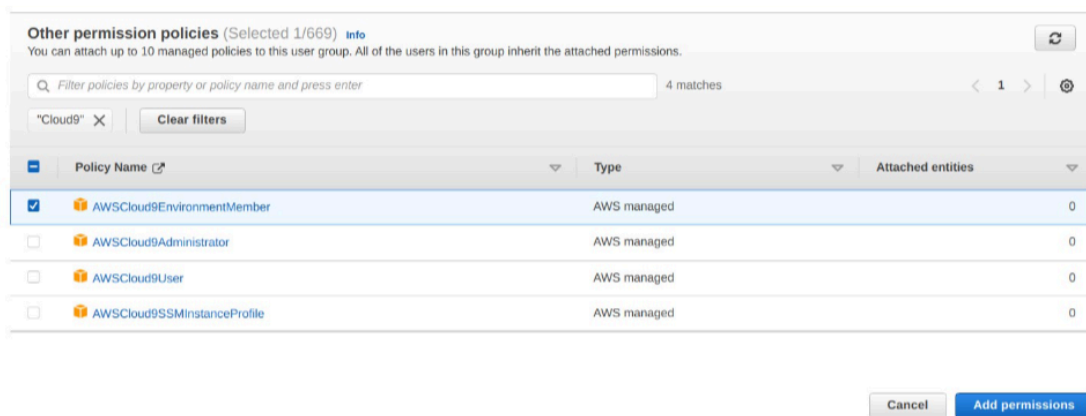

Filter User groups by property or group name and press enter

Group name	Users	Permissions	Creation time
<input type="checkbox"/> WebAppapsitgroup	1	Not defined	4 minutes ago

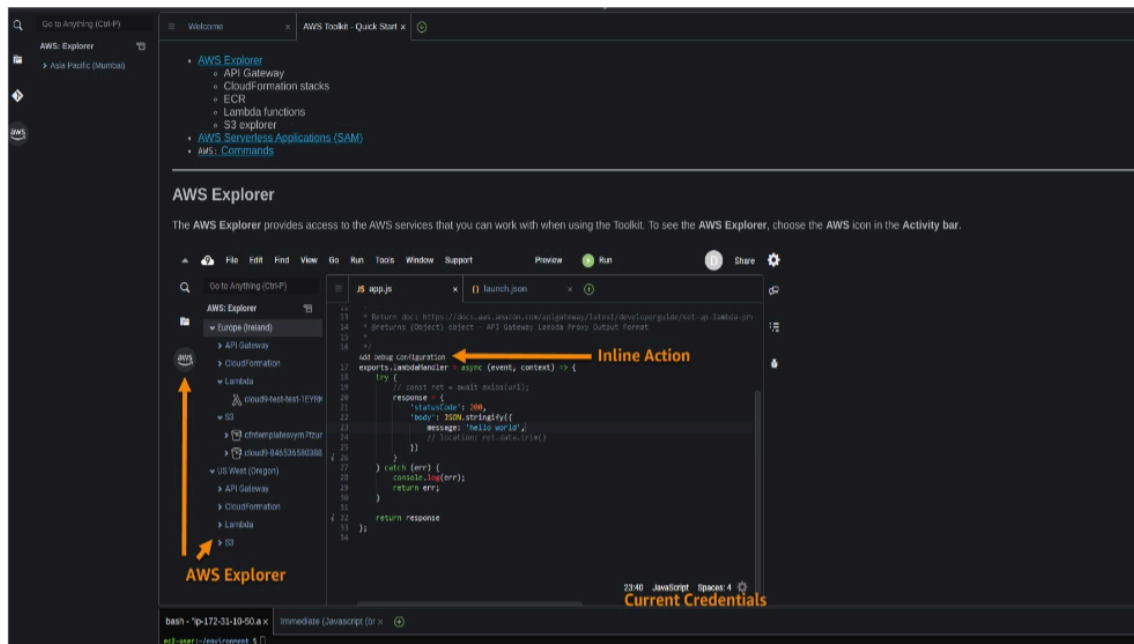

13. click on your group name which you have created and navigate to permission tab as shown:

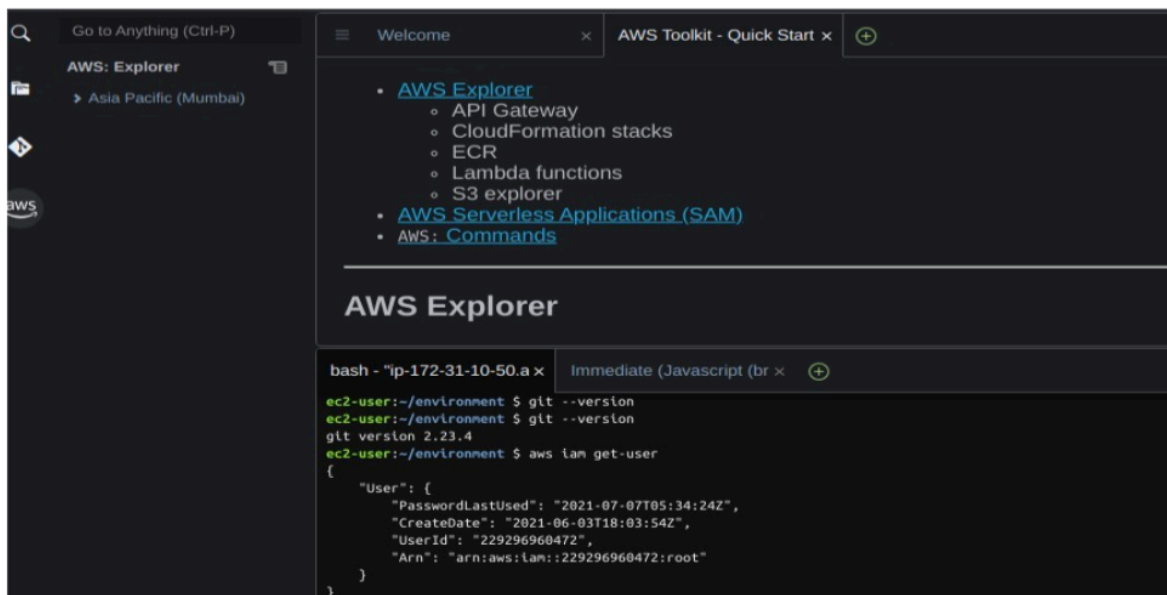

14. Now click on Add permission and select Attach Policy after that search for Cloud9 related policy and select Awscloud9EnvirnmentMember policy and add it.

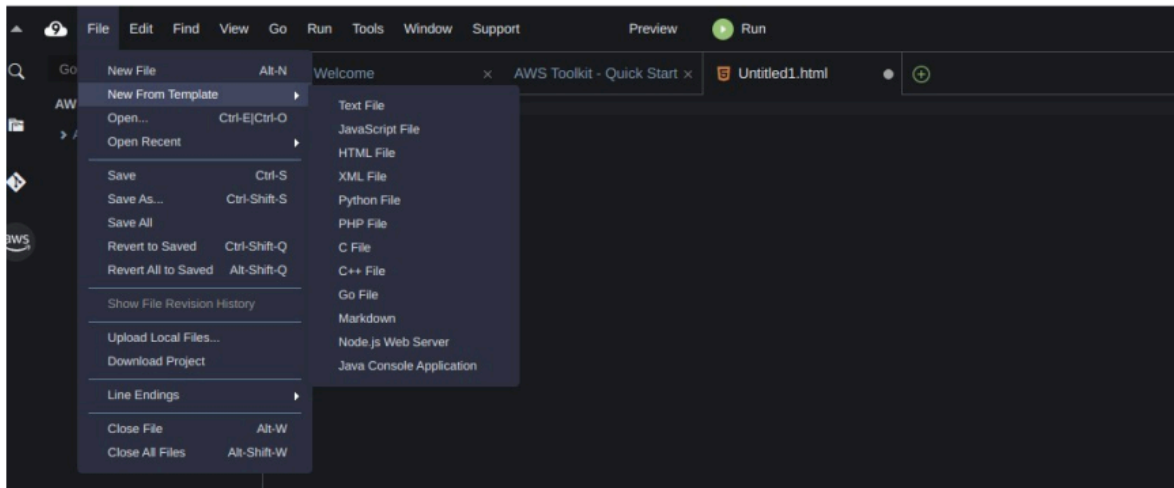

15. now we move towards our cloud9 IDE Enviornment tab it shows as shown :

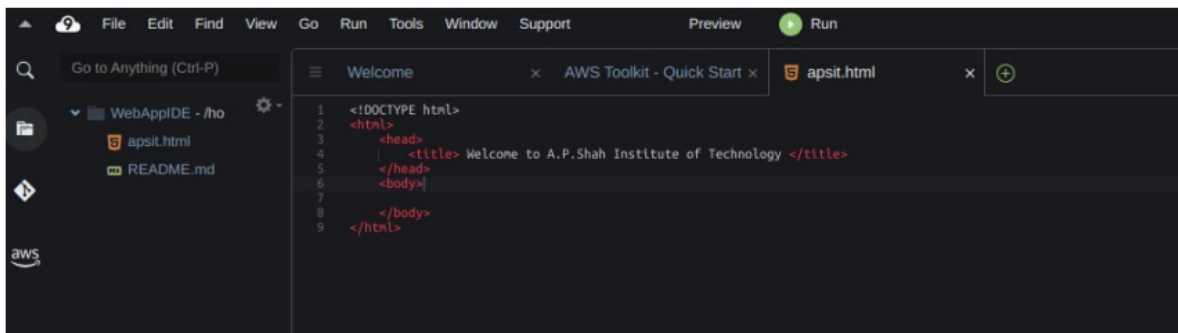

16. If you check at bottom side Cloud9 IDE also giving you and aws CLI for command operations: as we here checked git version, iam user details and so on...

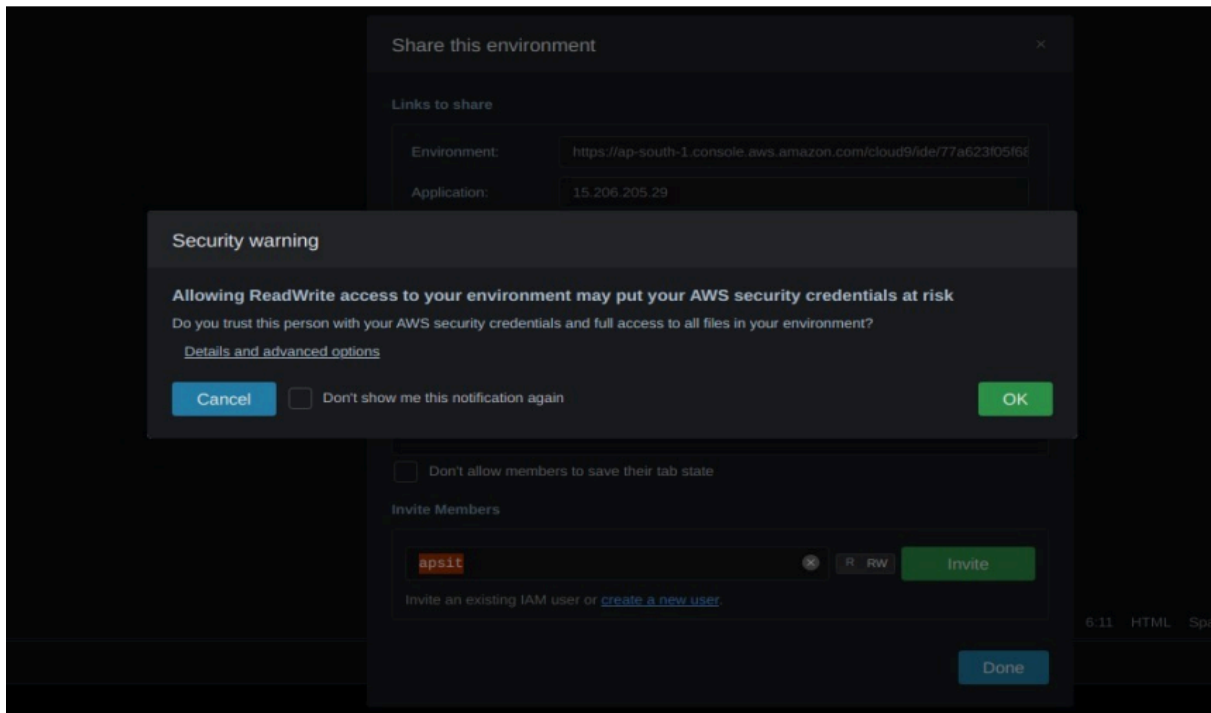

17. Now we will setup collaborative environment Click on File you can create new file or choose from template, here m opting html file to collaborate.

18. Edit html file and save it

19. now in order to share this file to collaborate with other members of your team click on Share option on Right Pane and username which you created in IAM before into Invite members and enable permission as RW (Read and Write) and click on Done. Click OK for Security warning.

20. Now Open your Browsers Incognito Window and login with IAM user which you configured before.

Sign in

☐ **Root user**

Account owner that performs tasks requiring unrestricted access. [Learn more](#)

☒ **IAM user**

User within an account that performs daily tasks. [Learn more](#)

Account ID (12 digits) or account alias

229296960472

☐ Remember this account

— New to AWS? —

Create a new AWS account

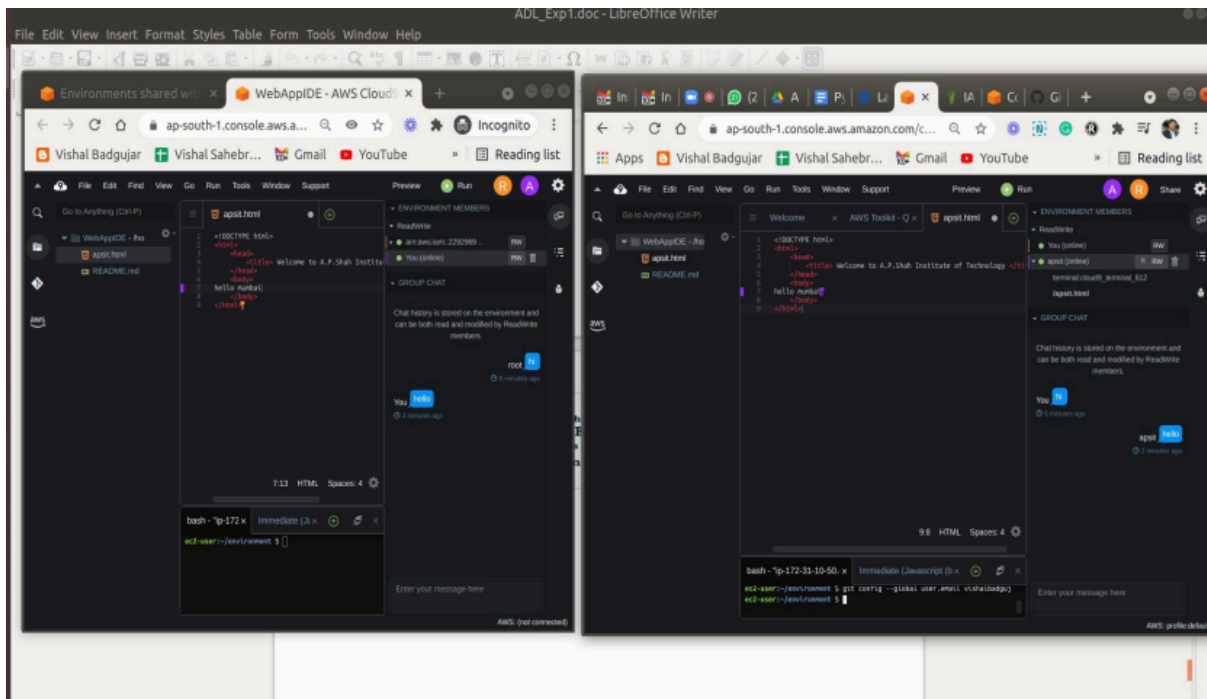

21. After Successful login with IAM user open Cloud9 service from dashboard services and click on shared with you environment to collaborate.

22. Click on Open IDE you will same interface as your other member have to collaborate in real time, also you all within team can do group chats as shown Below:

24. you can also explore settings where you can update permissions of

Conclusion:

The exploration of Cloud Infrastructure, particularly through AWS Cloud9, highlights numerous benefits that enhance both individual and collaborative development efforts. Cloud9 offers a powerful, cloud-based Integrated Development Environment (IDE) that facilitates seamless coding, debugging, and testing without the need for extensive local setups. This not only streamlines workflows but also promotes accessibility, enabling developers to work from anywhere with an internet connection.
